

Frontend Developer Intern Task

- **Github Repository naming convention:** azentrix-fullstack-task1, azentrix-fullstack-task2.
- **Use any stack, framework, or language of your choice.**
- **Include a README.md with setup instructions, approach explanation, and screenshots/demo.**
- **Create a video using Loom:** <http://loom.com/canvas> and share it.
- **Deadline: First week of July 2026.**

Task 1:

Problem Statement:

A fictional creative professional needs a portfolio website that leaves a strong first impression with smooth animations and clean design — not just a static page.

Task to Do:

Build an **Animated Portfolio** Website for a **Fictional Person that includes:**

- At least 5 sections: Hero, About, Skills, Projects, Contact
- Meaningful animations using CSS, GSAP, Framer Motion, or AOS
- Smooth scroll navigation between sections
- Fully responsive layout (mobile, tablet, desktop)
- A contact form with basic client-side validation

Task 2:

Problem Statement:

Users want a single dashboard to check current weather and browse top news by category — without switching between multiple apps or websites.

Task to Do:

Build a **Weather + News Dashboard SPA** that:

- Fetches real-time weather from OpenWeatherMap API (free tier) by city search
- Fetches news from NewsAPI or GNews API (free tier) with category filtering
- Includes a Dark/Light mode toggle with preference saved to localStorage
- Shows skeleton loaders while data is loading
- Handles all error states gracefully (invalid city, API failures, empty results)
- Is built as a Single Page Application with a clean component architecture
